PRODUCTION MASTERPLAN

Ubuntu Linux Masterclass: YouTube Creator Blueprint

Complete Production Pipeline, Screen Setup, Pedagogy, and Practical Curriculum

COURSE DURATION	TARGET AUDIENCE	TARGET RETENTION	PRODUCTION SCOPE
2.5–3 Hours	**Beginners & Devs**	**45%+ AVD**	**4 Weeks**
Single Mega-Course or 6-Part Series	Migrating from Windows/macOS	High practical terminal action	VM setup to publishing & shorts

4-Week Video Production & Delivery Timeline

EXECUTION WORKFLOW

Phase	Focus Area	Key Actions & Deliverables	Milestone
Week 1	Course Architecture & Scripting	Define target LTS release (e.g., 24.04 LTS). Draft dual-path script (WSL2/VM for beginners + Bare-Metal dual boot for power users). Build cheat sheet.	Curriculum Locked
Week 2	Lab Environment & Slide Decks	Configure clean virtual machines (VirtualBox/UTM/Multipass). Create high-contrast terminal prompt and vector diagrams of Linux Filesystem Hierarchy.	Test VMs & Assets Ready
Week 3	Studio Screencast Recording	Record clean 1440p 60fps screencasts. Capture on-screen keystroke visualizations (Screenkey) during terminal navigation, editing, and pipe demonstrations.	Raw Footage Done
Week 4	Editing, Packaging & Launch	Add zoom cuts on key terminal flags, sound markers for command execution, design 3 high-contrast thumbnails, and publish the GitHub companion repository.	Published & Promoted

Recording Environment, Audio & Terminal Typography

PRODUCTION QUALITY

Terminal & Display Standards

- **Resolution:** 2560x1440 (1440p) downsampled to 1080p stream for crisp mobile readability.
- **Font Hierarchy:** JetBrains Mono or Ubuntu Mono at 20pt–22pt with 1.45 line height.
- **Visual Keycaster:** Enable `screenkey` to display hotkeys (`Ctrl+C`, `Ctrl+Z`, `Ctrl+R`).
- **Prompt Styling:** Use a clean bash prompt (`user@ubuntu:~$`) instead of cluttered custom themes.

Viewer Retention Engineering

- **First 45 Seconds:** Show terminal speed vs GUI clicks: provisioning a web server in 3 lines of bash.
- **Progress Pills:** Overlay subtle on-screen topic titles so viewers instantly know where they are.
- **Show Real Gotchas:** Intentionally hit `Permission Denied` and demonstrate resolution via `sudo` and `chmod`.
- **Downloadable Asset:** Mention the free printable PDF Linux Cheat Sheet in the first 2 minutes.

Pedagogical Principle: "The File Tree is Everything"

Ubuntu and Linux can intimidate beginners who expect Windows `C:\` drives. Anchor all learning around the single unified Unix root directory (`/`) and the concept that *everything in Linux is a file* (including devices and running processes).

Curriculum Breakdown: Modules 1 to 4

FOUNDATIONS TO CORE OPERATIONS

Module 1: Introduction, Architecture & Installation Pathways

Timing: 25 Mins

- **Why Ubuntu?:** Debian lineage, canonical enterprise backing, LTS (Long Term Support) release cadence vs interim releases.
- **Linux OS Anatomy:** The Kernel, GNU Core Utilities, Systemd init system, Desktop Environments (GNOME) vs Server CLI.
- **Installation Options:** Zero-risk Windows WSL2 setup, VirtualBox/VMware installation, and live bootable USB stick preparation.
- **First Boot Tour:** GNOME desktop navigation, settings tuning, fractional scaling, and launching the default GNOME Terminal.

Module 2: The Terminal Mental Model & Filesystem Mastery

Timing: 35 Mins

- **Filesystem Hierarchy Standard (FHS):** Demystifying `/`, `/home`, `/etc` (config), `/var/log`, `/bin`, `/usr`, and `/tmp`.
- **Navigation Mechanics:** Absolute vs relative paths, `pwd`, `cd` shortcuts (`~`, `-`, `..`), and directory inspection with `ls -lah`.
- **File Operations:** Creating files with `touch` and `cat >`, directories with `mkdir -p`, moving/renaming with `mv`, copying with `cp -r`, and safe deletion with `rm -ri`.
- **Viewing & Searching:** Paging with `less`, inspecting ends with `head` / `tail -f`, locating files with `find`, and lightning-fast search with `grep -rnI`.

Module 3: Permissions, Ownership & Root Administration

Timing: 30 Mins

- **User & Group Model:** Understanding `/etc/passwd`, `/etc/group`, creating users with `adduser`, and group assignments with `usermod -aG`.
- **Permission Octals & Flags:** Dissecting `-rwxr-xr--`; Read (4), Write (2), Execute (1); calculation of `755` vs `644` vs `600`.
- **Modifying Access:** Recursive changes with `chmod -R`, user/group ownership modifications with `chown user:group filename`.
- **The Sudo Privilege Model:** Root security, executing privileged tasks with `sudo`, configuring the `/etc/sudoers` file via `visudo` safely.

Module 4: Package Management: APT, Snaps & Source Archives

Timing: 25 Mins

- **APT (Advanced Package Tool):** Repository architecture (`/etc/apt/sources.list`), cache updating (`apt update`), and packages (`apt install`).
- **System Upgrades:** Distinction between `apt upgrade`, `apt full-upgrade`, and cleanup with `apt autoremove`.
- **Debian Packages:** Inspecting and installing standalone binaries using `dpkg -i package.deb` and resolving broken dependencies.
- **Snaps vs Deb Packages:** What Snaps are, containerized sandboxing trade-offs, snap commands (`snap list`, `snap install`), and user controversy.

Creator Tip: Use an Interactive Permission Calculator Graphic

Show an animated graphic explaining the octal math for `chmod 755` before entering the terminal command. Breaking down User (7=4+2+1), Group (5=4+0+1), and Others (5=4+0+1) demystifies permissions instantly for viewers.

Curriculum Breakdown: Modules 5 & 6

PROCESS CONTROL & SHELL POWER

Module 5: Process Control, Systemd Services & Performance

Timing: 30 Mins

- **Process Hierarchy & Signals:** Viewing active processes with `ps aux` and interactive monitors (`top` / `htop`); sending signals with `kill` , `killall` , and `kill -9` .
- **Backgrounding & Jobs:** Running tasks in the background with `&` , inspecting jobs with `jobs` , foregrounding with `fg` , and terminal multiplexing with `tmux` .
- **Systemd Service Management:** Inspecting system units: `systemctl status` , starting/stopping services, and enabling auto-start on boot (`systemctl enable --now`).
- **System Logs with Journalctl:** Triage errors with `journalctl -xeu service_name` , time-filtering, and streaming live production server logs with `-f` .

Module 6: Text Editing (Nano/Vim), Pipes, I/O & Bash Automation

Timing: 25 Mins

- **In-Terminal Editing:** Beginners guide to `nano` (navigation, saving, exiting) + Essential Survival `vim` (Normal vs Insert mode, `:wq!`).
- **Standard Streams & Redirection:** Demystifying `stdin (0)` , `stdout (1)` , and `stderr (2)` ; writing to files with `>` , appending with `>>` , and `2>&1` .
- **The Unix Pipe (`|`):** Chaining utilities to build analytical pipelines: `cat /var/log/auth.log | grep "Failed password" | awk '{print $11}' | sort | uniq -c` .
- **Automated Scripting:** Writing an executable shell script with shebang (`#!/bin/bash`), arguments, conditionals, and scheduled automation via `crontab -e` .

YouTube Packaging, Titles, SEO & Promotion Strategy

GROWTH & DISTRIBUTION

Titles, Packaging & SEO

• **Title Option 1 (High CTR):** "Ubuntu Linux Full Course: Beginner to Power User in 3 Hours"

• **Title Option 2 (Broad Appeal):** "Stop Fearing Linux! The Complete Ubuntu Masterclass"

• **High-Volume Tags:** ubuntu tutorial, learn linux, ubuntu 24.04, linux commands, bash terminal, linux for beginners.

Thumbnail Strategy & Growth Assets

• **Thumbnail Layout:** Ubuntu Circle of Friends logo + Split face reaction + Clean terminal prompt with text: "WINDOWS IS DEAD" or "ZERO TO PRO".

• **Companion Assets:** Pinned GitHub link containing `cheatsheet.pdf` , sample bash scripts, and exercises.

• **YouTube Shorts Cutdowns:** "3 Linux commands you must know", "How to exit Vim without panicking", "chmod explained in 45s".

Creator Checklist: The Practice Sandpit Repo

Provide a companion repository containing sample log files and messy directories for students to test `grep` , `find` , and file manipulation commands without risking their own operating system.
